OLUSEGUN OPEYEMI EMMANUEL

WEB DEVELOPER

JavaScript | Firebase | Progressive Web Apps

CONTACT

Phone
08129470627

Email
opeyemiolusegun569@gmail.com

Location
Ota, Ogun State

Live project
Open the live app

SKILLS

Front end
JavaScript, HTML, CSS, responsive design, installable web apps (PWA)

Back end and data
Firebase Authentication, Cloud Firestore, security rules, realtime sync

Offline working
Service workers, caching, automatic sync

Documents and PDF
docx, docx-preview, html2canvas, jsPDF

Deployment
Netlify

INTERESTS

- Coding
- Playing the keyboard

PROFESSIONAL SUMMARY

Web developer who designs, builds and deploys complete web applications, from the interface to the cloud back end. Built a live, installable reporting app for Covenant University building projects, with secure logins, realtime syncing, offline working and downloadable PDF reports. Turns a real workflow problem into a clean, reliable and easy-to-use product.

WORK EXPERIENCE

Web Developer

27 Sep 2026 - 6 Oct 2026

Covenant University School Projects | College of Medicine / Health and Pharmaceutical Science building projects

Live app: https://covenantuniversityproject.netlify.app/

The problem: contractors on different campus buildings produced daily and bi-weekly reports by hand, so the admin had no single, current view of progress or money spent against the contract.

What I designed, built and delivered

- Built an installable web app where each contractor logs in, fills structured daily and bi-weekly reports (progress by element, materials, testing, plant, manpower and PPE) and submits them, for five contractors and one project admin.
- Set up role-based access with Firebase Authentication and Firestore security rules, so each company sees and edits only its own data while the admin sees everything.
- Created a live admin dashboard with realtime sync, so every update, new log and submitted report reaches the admin as it happens, with in-app notifications.
- Added contract value tracking: contractors enter contract amounts once, and progress percentages automatically work out the amount done and remaining for each element.
- Made the app work offline with a service worker and local saving, so contractors can keep working on site with weak signal and the data syncs when they are back online.
- Generated branded Word and PDF reports with site photographs in the browser, matching the university's report layout.
- Packaged it as a Progressive Web App with a manifest, cached assets and update handling, and deployed it on Netlify so it installs on phones like a native app.

Result: The app has been put into live use and confirmed to be working, with 5 reports submitted in a single day. Contractors now have one place to report, and the admin has one current view of progress and contract value across the buildings, with reports and photos ready to download.
